- Three-year electronics warranty
- One-year labor warranty

## The Ultimate Running Machine

In designing the Smooth 9.3 we had one major concern: What would a runner want? And that is how the Smooth 9.3 was conceived and built. It comes with a large 20" x 56" running surface, but can be extended to 62" for those with long strides.

It is equipped with the **premier Baldor continuous duty motor**, which is the Cadillac of treadmill motors. The Smooth 9.3 is installed with **large 2.5" institutional rollers** that will extend the life of your treadbelt. The **innovative I-3 electronics** are "Intuitive, Intelligent and Interactive." Not only does it come with challenging preset programs, but it is also designed to automatically learn each and every speed or incline change you make during your workout.

At **factory direct prices**, this is an incredible running machine.
